Interstate Commerce Commission Refuses to Cut Rates

WESTERN RAILROADS CAN MAINTAIN RATES EFFECTIVE AT PRESENT

WASHINGTON, Aug. 28.—Rates maintained by western railroads on wheat, fruit, vegetables and fresh, evaporated fruits from California, Utah and Nevada points were said today by the interstate commerce commission to be effective at present.

OPERATORS OF BETTS LEASE IN HIGH GRADE

Canadian Leasing Company, Headed by Mrs. Gillingham, Is Ready to Ship

The Betts lease, which was operated by the Super Six Mining company but which was reassigned on Aug. 15 to the Canadian Leasing company, following failure of the Super Six to make good its payments, is making use of the very best mineral workings that has been credited to the Roswell district in months. The mine has been picked up below that point where the fault was encountered and a body of solid ore is showing that has a width of seven feet and dump samples show values running as high as \$1500 a ton.

The Canadian Leasing company is composed of four people, namely: R. J. Hunt, a prominent insurance man of Montreal, Canada; Alex. Leach, who is an official of the Grand Trunk Pacific Railroad company; James A. Logan, who has been interested in mining at Roswell since its earliest inception; and Mrs. Dorothea Gillingham of Tonopah, who is a sister of Mr. Bond. Since work was instituted by the new leasing company under the direction of W. E. Edwards, engineer in charge, a shaft frame has been erected and a hoist has been delivered on the ground and will be installed and in operation by the first of September.

The vein was picked twenty feet to the west of the shaft and at a depth of fifty-five feet, and indicates lead ore to be found to be present in considerable depth. In fact, it is estimated that there is now exposed and ready for extraction as much ore as was mined during the administration of R. E. Betts and associates in the development of the ground.

CHICAGO & ALTON IS COMPLETELY TIED UP

ST. LOUIS, Aug. 28.—Passenger and freight service on the western division of the Chicago & Alton is at a standstill as a result of a walk-out of engineers, firemen, conductors and switchmen in protest against armed guards at Slater, Mo., and Roodhouse, Ill.

YOUTH SENTENCED TO LIFE STATE PRISON

LOS ANGELES, Aug. 28.—Valentine Hadeck, 20, was pleaded guilty to the charge of first degree murder last Thursday, was sentenced today by Superior Judge Houser for the murder here on April 29 of Mrs. Nancy M. Woodcock, an aged woman, who was strangled in her apartment and then robbed. The other defendant has not yet entered plea.

LABOR BOARD NOW HEARING WAGE DEMANDS

Railroad Shop Laborers Also Demand Recognition of Eight-Hour Law

CHICAGO, Aug. 28.—Hearing by the labor board was begun today on the petition of the maintenance of way employees and railroad shop laborers for over a hundred railroads asking an increase in wages from a minimum of 23 cents to 45 cents an hour and a demand for recognition of a bona fide union, with time and a half for overtime.

SAILORS START CLEAN TAGOMA OF BIG HOTEL

Entire Police Reserves and the Military From Camp Lewis Finally Called Out

TACOMA, Wash., Aug. 28.—The most menacing mob seen here in years was dispersed last night after every police officer in the city, provincial guards from vessels of the Pacific fleet, now in harbor, and the military police from Camp Lewis were called on duty. The mob consisted of 2000 sailors and civilians and was bent on destroying the St. Charles hotel, where three sailors had been stabbed. The arrest of 120 sailors finally brought quiet.

MRS. GUFFEY PROVED HERSELF SAMARITAN

Among the good samaritans who rendered assistance to the unfortunate women on Wednesday of last week, the day of the conflagration, was Mrs. R. L. Guffey, wife of Dr. Guffey. Mrs. Guffey, upon learning that a number of women had suffered the loss of their personal effects, packed a suitcase with wearing apparel and visited that section, bringing cheer to those who had been deprived of their wardrobes. Her acts have brought many words of commendation, and only go to show that she is a woman possessed of a heart that goes out to the unfortunate and grief-stricken, and that she is ever ready to lend a helping hand to those in want.

STORM WAS A FROST

What threatened to develop into a bad storm passed over Tonopah this afternoon shortly after 1 o'clock. The clouds that had assembled left the impression for a few minutes that one of the heaviest rains of the season was upon us, but after a fall of a few minutes the heavens cleared and the sun again came out. At any rate, the rainfall was refreshing, to say the least.

CANDELARIA IS READY TO START ORE TREATMENT

Capacity of Plant Will Be Six Hundred Tons Daily Instead Of Three Hundred Tons

Within another three weeks Candelaria, one of the most prolific of Nevada's early-day bonanza camps, will witness the beginning of new mining and milling operations that promise to again place it among the foremost silver-producing districts of the state. The new operation, operated by the Candelaria Mines company, is nearly ready to begin crushing ore, lacking only the power section, some additional tank capacity and the completion of piping and of the transfer extending deep the mine shaft to the crusher house. The power line from the city to the mill, 165 miles in length, has been built, transmission stations are being erected and the line is being strung at a rate of one mile a day.

Two water systems are owned by the company and a double supply has been derived from one of these in the past. To provide against possible shortage, however, both systems are available and now are now being used in repaying the pipe connections at the group of mines that has not been drawn upon in many years, but with which the water has been pumping the supply for the camp, will provide more water than could be used even with further development.

With an output of 400 tons in eight hours, the increase to 600 tons daily from the original 300-ton design involves the addition of little equipment other than crushing bins. The mill is a model of its type, compact with ample room in all its departments, built upon massive concrete foundations and will be flexible to a marked degree in its metallurgical operation. An important adjunct is a test plant that will remove the necessity for large scale experimentation and will insure the highest metal extraction in the operation of the mill.

Two grades of ore will be treated, the higher grade from the new stopes and drifts and the lower from old stopes and surface dumps. To provide for the proper mixing of these mine products the crusher bin is divided into two compartments, both feeding to the grinder. Mine cars from the main tunnel and from the Northern Belle shaft will pass over the bins on tracks from which the ore may be dumped to either bin.

The ore transportation system is admirably designed for lowest operation. A new branch of the main tunnel leads to a trestle extending over the crusher bins from which the track continues to the loading bins at the Northern Belle shaft. On this elevated electric locomotives will haul trains of four-ton, self-dumping cars. Ore from the Lucky Hill mine will be transported by gasoline locomotive around the side of Candelaria mountain to an ore-pass and dumped through a chute to the main tunnel level. A branch of the narrow gauge railroad extending from Mina to Kewler, Calif., provides transportation facilities for the camp. A telephone line connects with the long-distance service at Mina.

In the sampling of the Lucky Hill, Holmes, Northern Belle and Mount Diablo mines more than 15,000 samples have been cut and assayed and the results have been tabulated and summarized. Estimates of available tonnage and values, based on the earlier sampling, have been revised upward as a result of the resampling following work recommended in the geological report of J. A. Burgess, who spent several weeks in mapping the geology of the mines. It is now indicated that the original estimate of six years' supply of ore at 300 tons daily can be more than doubled and the estimated average value, instead of \$12.60, is \$18 per ton. Even the latter estimate is now regarded as low, since large

WOMEN CHLOROFORMED AND ROBBED JEWELRY

TACOMA, Wash., Aug. 28.—Search is being conducted by the police here for two men who yesterday chloroformed seven women in their hotel rooms and robbed them of jewelry valued at \$7000. The men wore sailors' uniforms. They operated in seven separate hotels. In all cases they followed the women to their rooms, forced entrance by force, then forced them to lock their doors, and then robbed their victims after chloroforming them.

JAPANESE HELD SERIOUS CHARGE OF SYNDICALISM

Says if He Had Been Given Two More Weeks He Would Have Had Completed Work

SEATTLE, Aug. 28.—A Japanese student is under arrest at the University of Washington, charged with criminal syndicalism according to the harbor master police who made the arrest, and Seattle advanced he was exhibiting extreme views. The student, who is a student in the U. W. M. and boasted that he had been allowed to copy the constitution for two weeks, he would have signed up every Japanese student in the harbor.

WOBBLES HELD FOR WRECKING EXPRESS TRAIN

Two Meet Death as Result of Plot Against Railroad Company Near Gary, Ind.

ATTO MIO, Aug. 28.—Five men, alleged to be members of the I. W. O., are being held at Gary, Ind., in connection with an alleged plot to wreck an express train, which was allegedly inspired by members of the Russian soviet regime, which accomplished the wreck of an express train in which two men were killed at Gary on Aug. 29.

EXCHANGE TAKES HOLIDAY

There will be no call on the San Francisco Stock Exchange tomorrow, which will be observed as a result of the primary election in California. As a result there will be no business transacted in the local brokerage offices.

Dumps have been found to contain ore averaging from 12 to 20 ounces silver per ton. The dumps appear to be uniformly of good value and the solution of fault problems in the old mine and opening of high-grade veins in the Lucky Hill and Northern Belle promise a large tonnage of high-grade material. In the estimates of available ore no account has been taken of the so-called 16-vein, opened back of the main vein in the Lucky Hill mine. This vein has been exposed on the intermediate level above the main adit level and by a raise from the first shaft level, 100 feet below the tunnel. A crosscut on the intermediate level shows this vein to have a width of thirty feet. A drift extending over forty feet in this vein broke ore averaging over \$30 per ton and was stopped in ore assaying 42 ounces silver per ton. The Main and Lucky Baldwin veins in the Lucky Hill mine range in width from eight to thirty feet and from development work alone, over a length of 400 feet, they produced 10,000 tons of ore averaging 36 ounces silver and \$110 lead.

EFFORTS BEING MADE TO EFFECT RELEASE MEANS MULDOON SHAFT

JACKSON, Calif., Aug. 28.—Air supply is being maintained constantly between the main and Muldoon shafts, but it is believed to be too thin up in the mine to do much good. Water is being sent down the main shaft in skips and is being released from skips when they reach the bottom of the fire. Most of the men are married. The rush of anxious relatives to the scene of the disaster attending the tying off of the main shaft. Many police men are being enlisted. Outside the mine women and children with bread-crumbs are waiting for information that are coming from the bottom of the shaft. Nearly a mile under ground a kind of half-cave and swarming with bats, is being dug at the Muldoon shaft. The men hope of reaching their entombed fellow workers before the flames and deadly gases do their work. Clarence Bradshaw, shift boss kept at work in rescue until overcome by gas and was taken home nearby, where he is said to be slowly recovering.

SACRAMENTO, Calif., Aug. 28.—Quoted to the Bee at 2 o'clock Sunday Superintendent Kennedy of the mine said the battle between the two mines is not over and there was a chance of saving the men through the Muldoon shaft.

JACKSON, Calif., Aug. 28.—From fifty to seventy men entombed in the famous Argonaut mine, below the 3500-foot level by a fire which broke out in the main shaft shortly after midnight were still in the mine this morning. The fire continued burning and efforts are being made to reach the miners through the abandoned Muldoon shaft, which touches the vein where the men were working. The Muldoon shaft has been used as an air feed in recent months and the opinion was expressed by those who visited the mine.

DEL PAPA BUYS BUILDINGS OVER AT GOLDFIELD

Structures Being Moved Over to Take Places of Those Destroyed by Fire

Two houses purchased in Goldfield by A. Del Papa arrived in Tonopah today and will take the place of those buildings destroyed by fire on Wednesday last week. Mr. Del Papa has great faith in the future of Tonopah, and not only is he rebuilding the homes that were destroyed, but construction work is under way on his store building and it will not be a great while now until he will again be ready for business at the same old stand.

Improving and repairing the building of the Tonopah Hoisting Works has been started and it is expected to have matters ready for the resumption of business within a very short time. New machinery has been ordered and it is expected to arrive in a short time. Louis King, who owned a number of buildings in the restricted district which were destroyed, has announced that he will rebuild immediately. Louis is a live wire and believes in doing things, and despite the fact that his loss aggregated \$4000, he is confident of Tonopah's future and will lose no time in reconstruction. WEEKLY WEATHER FORECAST WASHINGTON, Aug. 26.—Southern Rocky Mountain and Plateau Regions.—Generally fair weather and moderate temperature. Pacific States.—Generally fair with normal temperature.

BUTLER
—THEATRE—
—TODAY—
HOPE HAMPTON in
"STARDUST"
A drama of Broadway's troubles and joys—told from the heart of a woman. A play that finds humanity in the shadows and reveals a girl who rebelled against love and the shackles which witchhood imposed. It's soul-searching. Adapted from Flannery O'Connor's famous novel.
Tower Floor, 30c; Balcony, 25c; Children, 20c.
